The perfect acquisition:

roda becomes part of the LAMILUX Group

On 1 January 2018, LAMILUX acquired *roda*. The group consists of *roda* Licht- und Lufttechnik GmbH, which is based in Langenau (*roda* Süd) and Isernhagen-Kirchhorst (*roda* Nord), as well as the company Emmericher E.M.B Products AG. As a result of the acquisition, the family-run company located in Rehau has grown by around 120 employees.

The three *roda* companies have become full subsidiaries of LAMILUX. The managing directors of these companies will keep their positions even after the acquisition: Bernd Kaemmerer and Jens Hartung will remain at *roda* Nord and Alfred Bosch and Frank Eberhardt at *roda* Süd. Burkhard Weyers will remain CEO of E.M.B. Since 1986, *roda* has been a renowned manufacturer and installer of high-quality smoke and heat exhaust ventilators, industrial ventilation systems, daylight systems and translucent facade technology in Europe.

The merging of the two companies is a continuation of LAMILUX Group's solid and substantial corporate development and ought to further emphasise its position as a leading premium supplier of daylight systems and provider of customised and tailored solutions for smoke and heat exhaust ventilation systems. Dr. Heinrich Strunz, Managing Director of LAMILUX is confident: "With *roda*, we have gained a strong partner." He stated that, among other things, the company can expect significant growth in the field of ventilation technology thanks to the manufacturer's portfolio. "This will allow us to further expand our established position in the market."

To ensure that the customers can continue to rely on the manufacturers' innovative and high-quality products and services, LAMILUX strives to cooperate in the development of new products in the future. Customers will still be able to count on their well-established contacts both abroad and in Germany.

With over 950 employees, LAMILUX achieved a turnover of 263 million euros in 2017. The company is one of Europe's pioneering manufacturers of daylight systems, multifunctional glass roof structures and complex building control systems and one of the world's leading producers of high-tech carbon fibre and glass fibre-reinforced composites.
