

## ROOFLIGHTS & ROOF GLAZING

### Project reference

LAMILUX Glass Skylight FE 3°  
Milton Keynes University Hospital

LAMILUX U.K Ltd supplied and installed three large Glass Skylight FE circulars at Milton Keynes University Hospital. The new two-storey Academic Centre has been designed to provide a medical education and training facility for students and health professionals.

Each skylight measures a roof opening size of 2500mm diameter, offering a striking light size of 2200mm and an impressive 80% light transmission value, thus adding a generous amount of natural daylight to enrich the interior.

The skylights were delivered pre-assembled to the 300mm high GRP upstand, which is thermally insulated and has a U-value of  $< 0.9 \text{ W/m}^2\text{K}$ . This makes a much simpler installation process as having to prepare an upstand on site, for a circular rooflight, can be a costly and timely method.
